In Ukraine there are no important and economically perspective components of engineering in health protection system. Now, we have only operation and service of medical devices and equipment.

These problems can be solved by training of medical engineers, considering world experience. The Intercollegiate College of Medical Engineering (ICME) of the National Technical University of Ukraine "Kyiv Polytechnic Institute" is going to preparation of specialists in the fields of operation, service and certification of different medical devices and equipment.

The ICME is developed of the standards of biomedical education in Ukraine using the best experience of different countries. Also, the ICME specialists were preparing educational programs of biomedical engineering which are as much as possible approached to the European programs.
